VIDEO SCREENING

Solution 1 - Screening run by Cinema Odeon staff

Management and screening of movies (audio and video) during the event handled by a technician of Odeon Firenze. It requires content lineup and pre-recorded video/ PowerPoint on compatible digital media.

Solution 2 - Screening managed independently by the client

The independent management of video screening requires activation of a Ethernet HDMI Fiber Optic connection between an audio / video direction adjacent to the client stage and the screening booth. This allows the operator to independently manage the pre-recorded video and audio, mix them and send them directly to the theater sound.
